# Lean Sigma Manufacturing

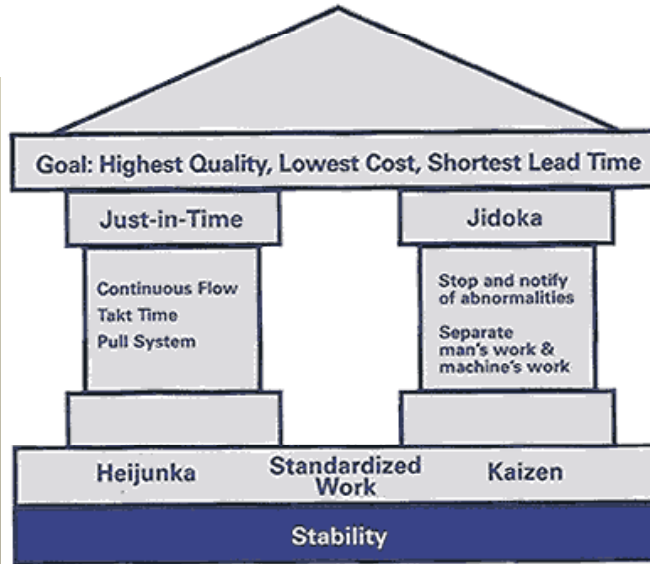

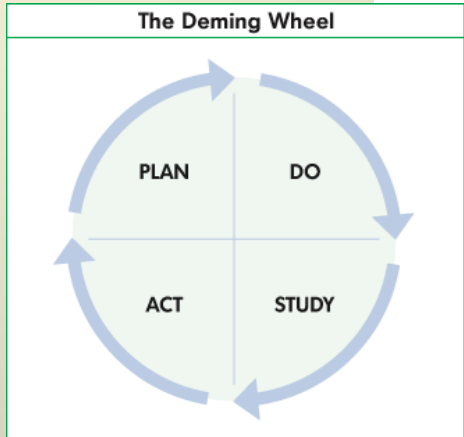

# Lean Six Sigma Review

# What is Lean?

Minimal Training

Broad Application

Positive Impact

Toyota Production System "House"

# VA & NVA

# Lean Six Sigma Review

## The Methodology

Define Phase

Measure Phase

Analyze Phase

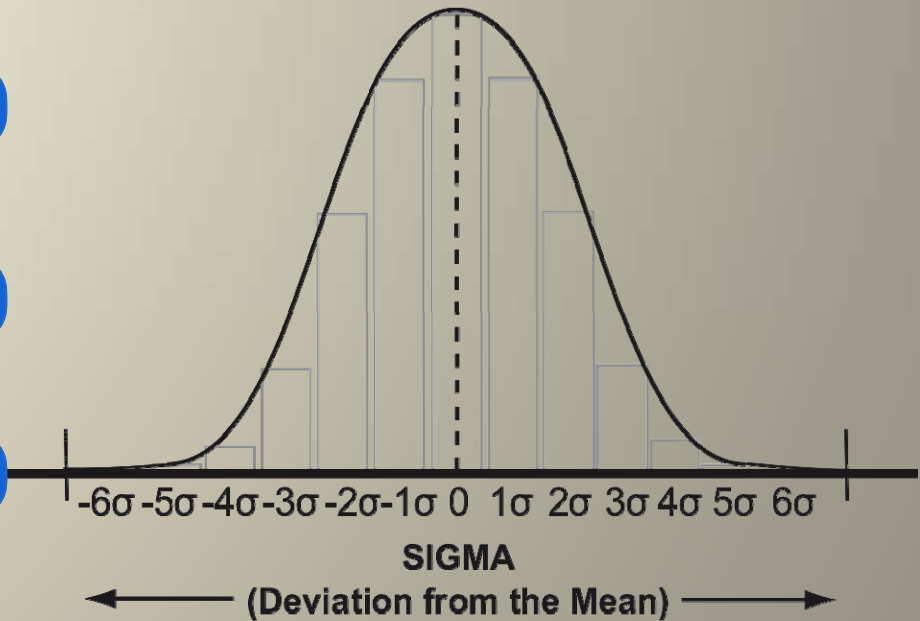

Improve Phase

Control Phase

# What is Six Sigma?

## The Number Mean or Average

Referred to as the “D-M-A-I-C” process  
Analytical and Process focused  
(Method and Tools)

Eliminate defects and minimize variability

## What is Lean Six Sigma?

**Delighted Customers and Profitable Growth**

*Best Quality, Lowest Costs, Fastest Delivery, and Innovation*

### Lean Concepts

Value and Waste  
Quality First  
Speak with Data and Facts  
Total Employee Involvement  
Seek Perfection

Plan-Do-Check-Act  
Flow  
Waste Elimination  
Customer Focus  
Performance Measures

### Lean Sigma Tools\*

5S  
Continuous Flow  
Data Collection and Presentation  
Employee Balance Chart  
Just-In-Time (JIT)  
Layout  
Leveling (Heijunka)  
Mistake (or Error) Proofing  
Performance Dashboards  
Plan-Do-Check-Act  
Problem Solving  
Pull Systems and Kanbans  
Quick Changeovers  
Standard Work  
Statistical Process Control  
Takt Time and Demand Analysis  
Teamwork  
Total Productive Maintenance (TPM)  
Value Stream Mapping  
Visual Controls  
Voice of the Customer (VOC)

### Six Sigma Concepts

Scientific Method  
Statistical Methods  
Focus on Variation  
Proven Methodology  
Common Goal of Six Sigma

DMAIC  
Quantitative Analysis  
Look for Hidden Causes  
Voice of the Customer  
Zero Defects

**Best of both worlds!**

### Lean Sigma Principles

Continuous Improvement in Processes and Results  
Focus on Customers and Value Streams  
Total Employee Involvement

### Lean Sigma Philosophies

Conservation of Resources (Sustainability or Becoming Green)  
Relentless Pursuit of Waste Elimination

# Lean Sigma Office/Administration

# Lean Sigma Service

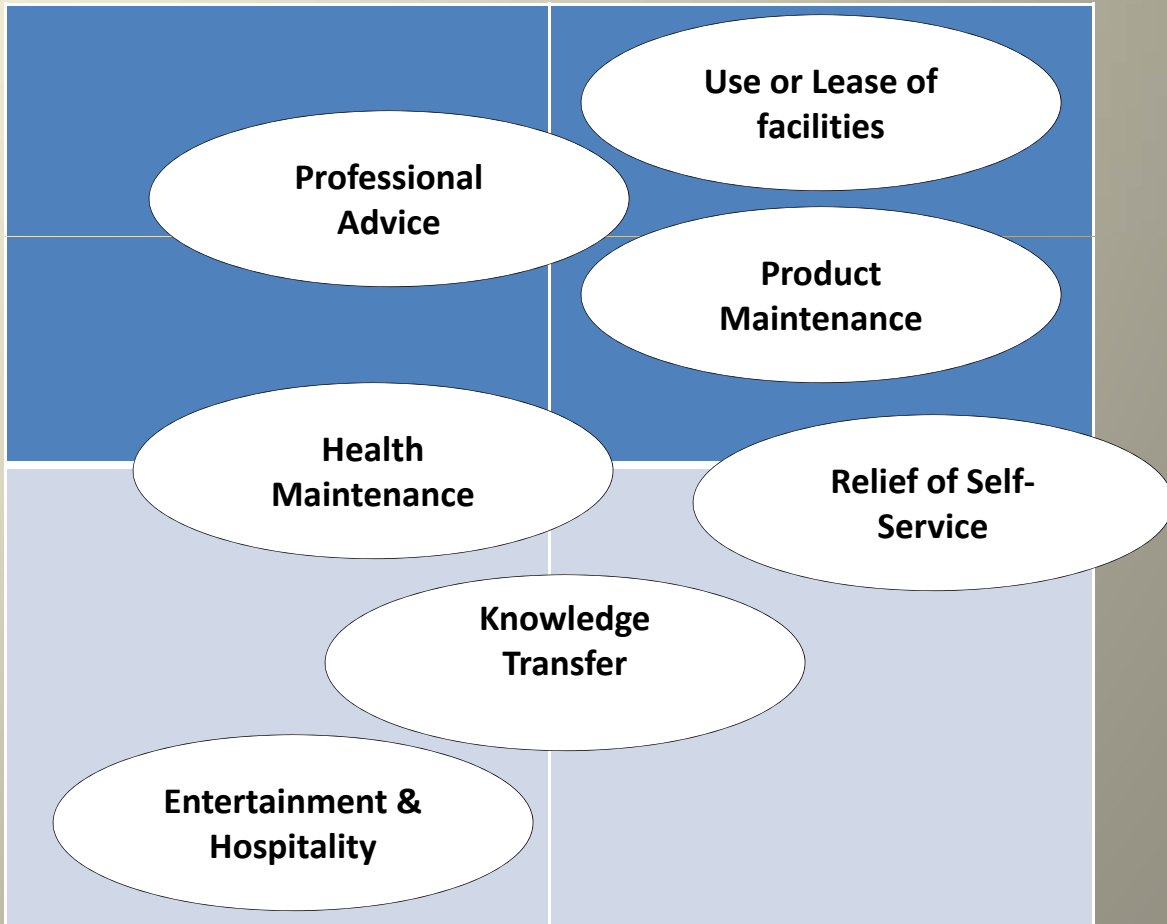

# Service Overview

## What is Service?

*Service* is generally defined as work performed for someone else's benefit or pleasure.

Process, Task or Item  
Focus Service Outcome

People, Psychological, or  
Enjoyment Focus Service  
Outcome

SUBJECTIVE Outcome

OBJECTIVE Outcome

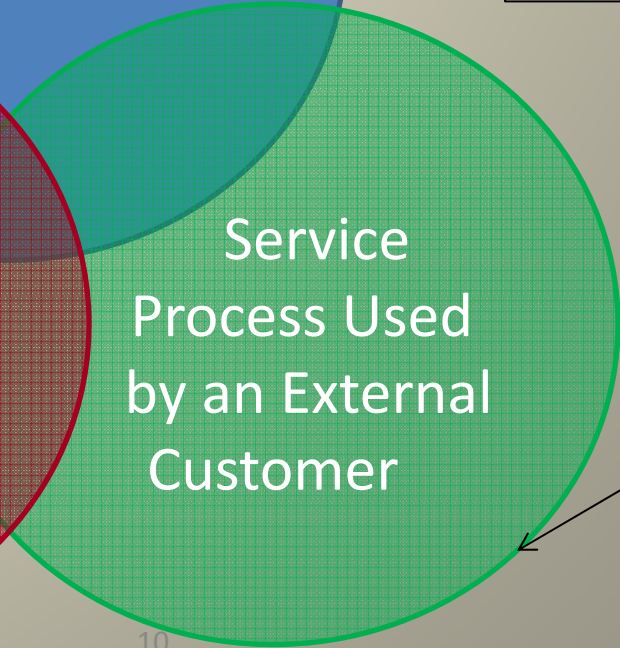

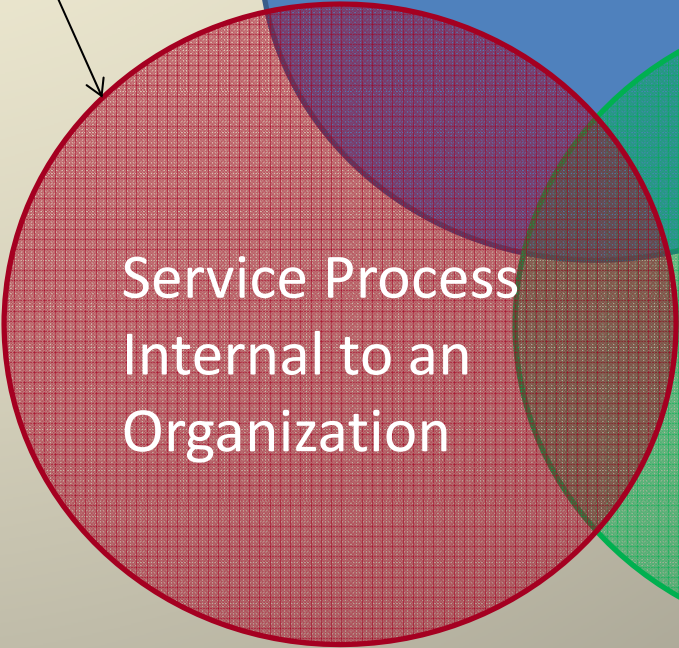

# Service Overview

# What is Service?

- Examples:**
- Payroll processing
  - Quality inspection/audit
  - Internal Training class
  - Machine cleaning & repair
  - Building maintenance
  - Report Preparation
  - **Material storage and distribution**

- Examples:**
- Hair cut
  - Legal document or advise
  - Package delivery
  - Car wash
  - Home maintenance
  - Auto Repair
  - **Material or goods distribution**

- Examples:**
- Automatic Teller Machine
  - Hospital Check-in
  - Merchandise return
  - Drivers License renewal
  - Training class
  - Insurance Claim
  - **Material or goods storage**

# dcIQ Assessment and Design

## Service Case: Distribution Center

2011

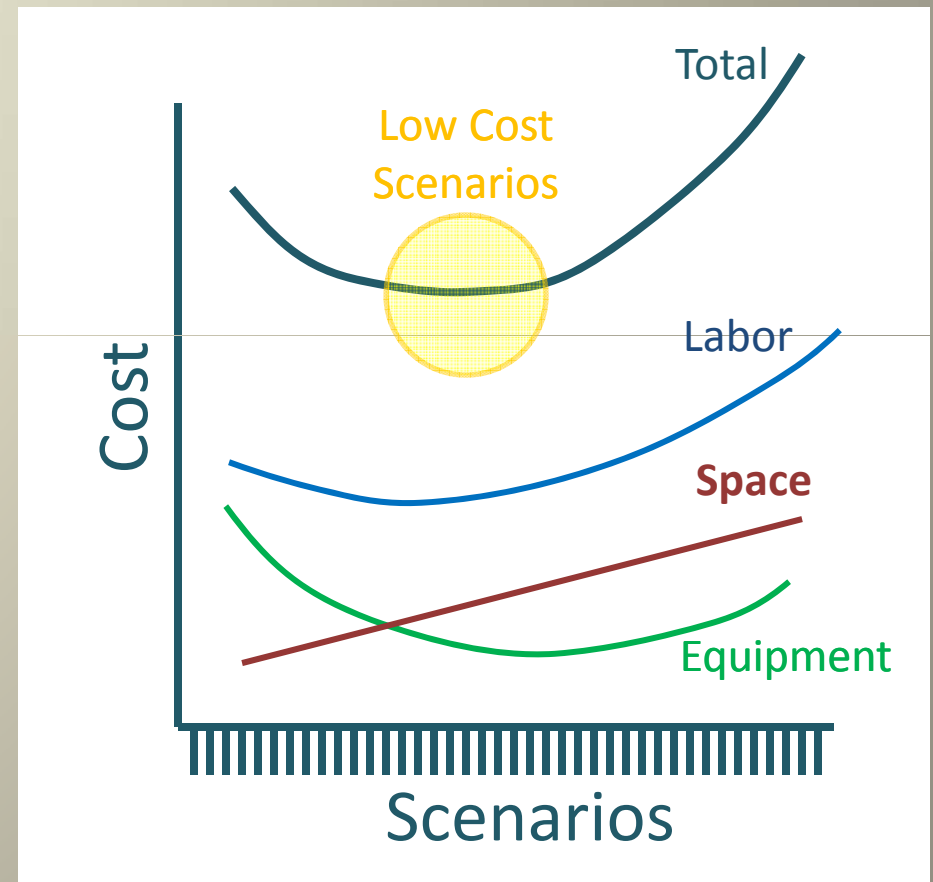

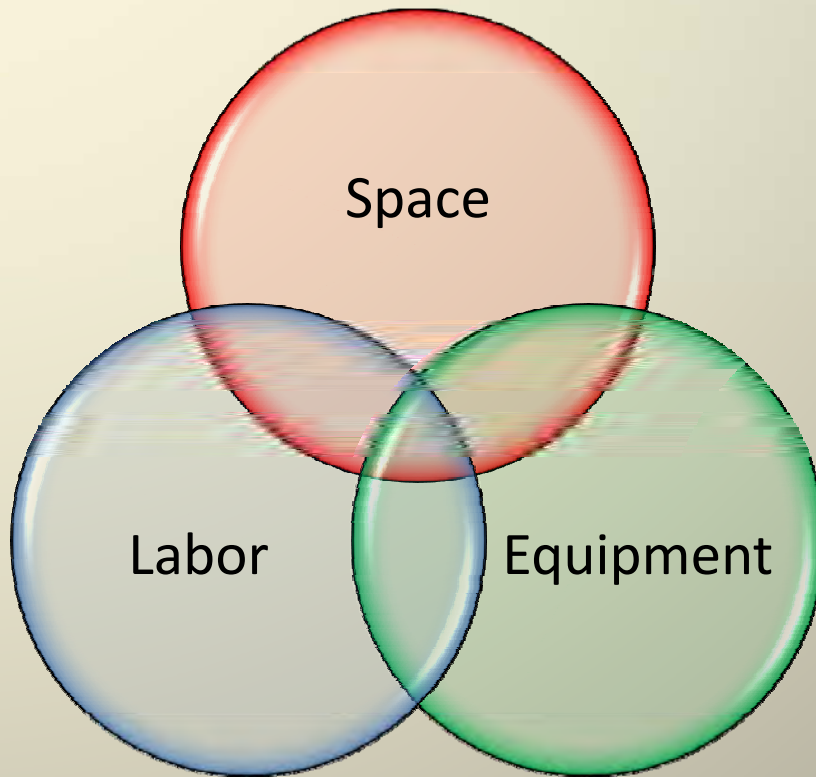

# Case Overview

- Introduction: Company & situation
- Approach
- Process and Case Analyses
- Results
- Summary

# Case Overview

- Introduction: Company & situation

# Lean Sigma Approach & Power Tools

Map all combinations of costs in order to find the one best way

# Assessment Approach

**Objective** Evaluate the current operation to determine improvement opportunities

**Approach**

Walk-through  
Apply consultant expertise to a visual inspection of the current operation

Benchmark  
Compare current data to industry standards

dcIQ  
Apply current data to all combinations of space, labor and equipment

**Result**

Feasible and infeasible improvements with no business case

Standardized opportunities that might apply to the operation

Implementable changes with quantified savings and costs

**Output**

Written report

Quantified comparison of current operation to standards

**Simulation with combinatorial analysis**

**Timing**

3 – 5 days

2 – 12 weeks

**2 – 3 weeks**

# Design Approach

## Objective

Develop a facility layout that meets service, volume and budget requirements

## Approach

### Traditional

Create example layouts based on

- Current operation
- Industry example
- Designer experience

### dcIQ

Develop least cost strategy derived from all combinations of space, labor and equipment

## Result

Functional design based on 2 – 3 layout alternatives

Design that achieves lowest cost per unit throughput

## Output

Asset application

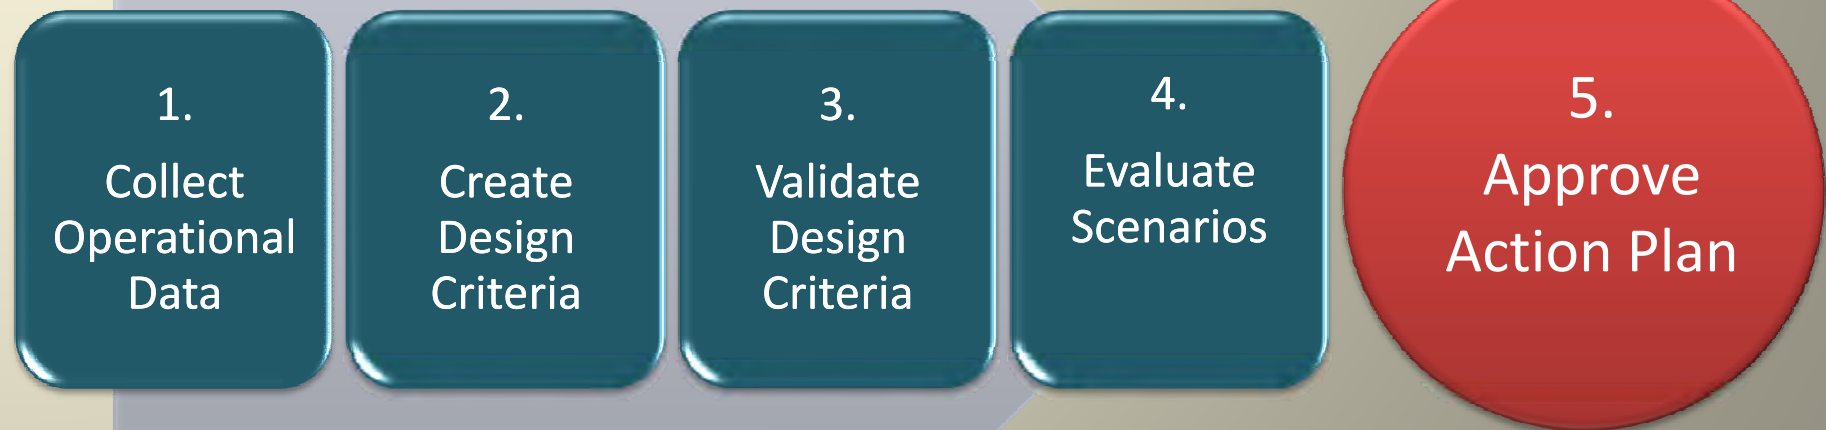

**Least cost strategy**

## Timing

12 – 14 weeks

**8 – 12 weeks**

# Case Process

Typical assessment takes 2 – 3 weeks; design takes 8 – 12 weeks

# 1. Operational Data

Assessment and design starts with compiling over 140 data points related to the facility's costs, service and policies

- Order volume and characteristics
- Inventory characteristics
- Operations
  - Labor cost
  - Operating policies
  - Other
- Cost drivers
  - Demand
  - Operating strategies

## 2. Design Criteria: Space

Evaluate opportunities related to aisle type, slotting and storage media

- Building dimensions
- Column width
- Aisle type
- Storage height
- Storage media
- Opportunistic storage
- Cost drivers
  - Travel distance
  - Space utilization

## 2. Design Criteria: Flows

Evaluate flows to generate scenarios for equipment, slotting and layout

- Processes
  - Unloading
  - Put away
  - Picking
  - Loading
  - Others
- Horizontal distance
- Vertical distance
- Cost drivers
  - Frequency of flow
  - Distance
  - Flow capacity

## 2. Design Criteria: MHE

Compare the impact of over 25 types of material handling equipment

- Type
  - Hand jacks
  - Riders
  - Counterbalance
  - Other
- Capability
  - Aisle width
  - Reach height
  - Other
- Cost drivers
  - Capital
  - Speed
  - Capacity
  - Utilization

## 3. Validate Criteria

We confirm the  
data with you  
before proceeding  
with the analysis

- Labor Costs
- Building Specs
- Volumes
- Distances
- MHE Assumptions
- Outcome
  - Current state
  - Platform for analysis

# 4. Evaluate Scenarios: Layout

- Space requirements
- Least travel
- Outcome
  - Best aisle configurations
  - Best travel distances
  - Best labor utilization

Compare the operational and cost impact of all possible layout solutions

# 4. Evaluate Scenarios: MHE

- Least capital solution
- Least labor solution
- Outcome
  - Capital/total cost trade-off
  - Best labor and equipment utilization

Compare MHE speeds and capacities to your facility's flows

# 5. Action Planning

- Speed to implement
- Value add
- Capital requirements
- Outcome
  - Sequenced change
  - Timeline
  - Budgeted savings

dclQ provides enough detail to prioritize specific opportunities or proceed to full facility re-design

	<i>Opportunity</i>	<i>Description</i>	<i>Savings</i>	<i>Capital</i>	<i>Speed</i>
1	Overdock	Opportunity storage	\$ 5,000	\$ -	30 days
2	Aisle width	Reduce over-size aisles	\$ 45,000	\$ -	60 days
3	MHE-picking	Use 96" forks	\$ 76,000	\$ 3,000	30 days
4	MHE-unloading	Use counterbalance	\$ 63,000	\$ 35,000	90 days

# Results: Case Study

Baseline Layout

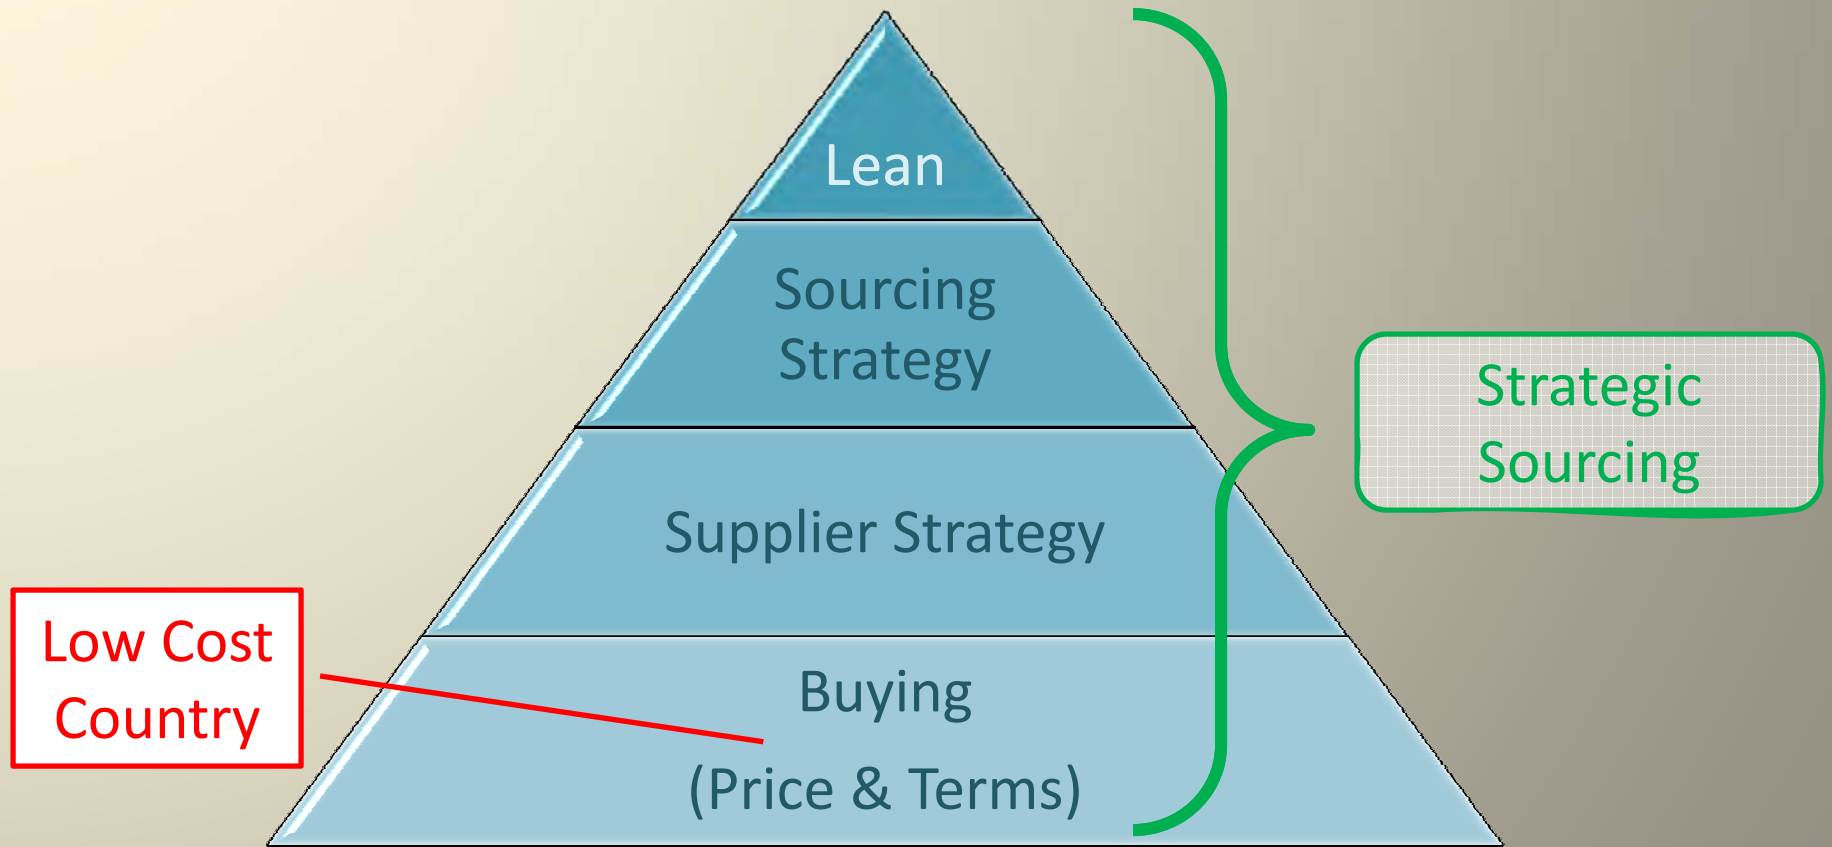

Future Layout

	<b>Baseline</b>	<b>Future</b>	<b>Savings Drivers</b>
Space	<ul style="list-style-type: none"> <li>70,000 square feet</li> <li>Standard aisle width</li> <li>No slotting</li> </ul>	<ul style="list-style-type: none"> <li>50,000 square feet</li> <li>Narrow aisle</li> <li>ABC slotting</li> </ul>	Reduced cost of space and travel distances
Material Handling	<ul style="list-style-type: none"> <li>4 sit-down counterbalance</li> <li>6 reach trucks</li> </ul>	<ul style="list-style-type: none"> <li>2 sit-down counterbalance w/double length forks</li> <li>4 reach trucks</li> </ul>	4 fewer units and batteries
Staffing	<ul style="list-style-type: none"> <li>10 full time employees</li> <li>10% overtime</li> </ul>	<ul style="list-style-type: none"> <li>7 full time employees</li> </ul>	Staff reduction of 3 with overtime reduced to zero

<b>Budget</b>	<b>Baseline Cost</b>	<b>Future Cost</b>	<b>Savings</b>	<b>%</b>
Space	\$ 280,000	\$ 200,000	\$ 80,000	29%
Equipment	\$ 336,000	\$ 144,000	\$ 192,000	57%
Staffing	\$ 272,000	\$ 136,000	\$ 136,000	50%
Overhead	\$ 165,000	\$ 165,000	\$ -	0%
<b>Total Annual Cost</b>	<b>\$ 1,053,000</b>	<b>\$ 645,000</b>	<b>\$ 408,000</b>	<b>39%</b>

# Next Steps: Strategic Sourcing

“Low cost country” is tactical buying with a focus on piece price

“Strategic sourcing” uses a broader approach with a focus on total landed cost

# dcIQ Assessment and Design
